HINTS ON GROWING GLADS

When the spring months roll around, if our glad fan has not placed his order for bulbs, he at once begins to pore over the offerings of the various growers. First he has in mind the varieties or at least the characteristics of the varieties that he wants. If he has the latter, any reliable grower will gladly help him make his choice.

Second - As half the growing is in having good stock to start with, he will choose a reliable grower, who has a reputation for honesty, stability, and dependability. All bulbs grown for sale should be treated with some disinfectant such as Calogreen, Corrosive sublimate, or Semesan, before planting to insure a clean crop of healthy bulbs. Just recently a new pest has developed - thrips. The careful buyer will insist that all bulbs he buys are warranted free from thrips at time of shipment.

Third - he must also decide upon the size of bulbs that will suit his purposes best for the least expenditure. For most purposes No. 2 or No. 3 bulbs are satisfactory. However if he wishes to raise some extra quality blooms for show or some special purpose, No. 1 bulbs are essential in most cases.

After the selection has been made and the bulbs arrive the glad fan gives his attention to planting. Any ground that is reasonably fertile will do, the richer the better for show blooms. It is better to use a moderate amount of commercial fertilizer than fresh manure, as the latter tends to encourage disease. The ground should be well pulverized. In planting our fan will dig a trench fully four inches and set his bulbs firmly in the bottom. They may be planted from two to six inches apart. This deep planting helps to keep the flowers from falling down in the summer. The planting may be done any time after the ground warms up in the spring until June 15.

After much hoeing and cultivating (and watering, if it happens to be a dry summer) for a period of sixty to ninety days, depending on the varieties and size of bulbs used, our fan is rewarded by a burst of beauty that is unrivaled, as compensation for his efforts. If he has selected and planted wisely, he will have a continuous blooming season from July 20 until October in our climate.

When cutting spikes, the fan is always careful to leave from four to six leaves to mature the bulb - the bulb will last a long time with this treatment. This may be done by slipping a knife down between the leaf and the stock for some distance, first on one side, then on the other, finally giving the knife a turn thus cutting off the stem. The spike may then be lifted out without breaking down the leaves.

Three weeks or more after the flowers have bloomed the bulbs are ready to be harvested. This is best done by loosening with a fork and gently pulling the bulb out of the ground by the top. The tops are then cut off close to the bulb and the bulbs allowed to cure in the sun, if possible for a week or two. They are then ready to have the old bulb removed and be put away for the winter. The best place to store bulbs is in rather moist cool place, out of danger of freezing. They are now ready for another season.

BULLETIN SERVICE. *Elm Hill Farm* maintains a service for glad fans, which includes answering their questions to the best of our ability and carrying a set of mimeograph sheets on various phases of glad growing. Some of them are:

1. The best dozen glads.
2. Growing and preparing glads for show.
3. Hints on growing glads.
4. Common diseases of glads and their control.
5. Thrips and their control.

Any of these will be sent on the receipt of a stamped, self-addressed envelope, or sent free in connection with an order if requested.

DON'T FORGET that *Elm Hill Farm* earnestly endeavors to give you always, the best possible bulbs and service. We treat our bulbs every year and guarantee that our bulbs are as fine as can be had and are free from thrip. *Elm Hill Farm* has been growing and selling the best bulbs for 46 years. We have many customers who have ordered bulbs regularly for a good share of that time. If you have never secured any of our bulbs, you owe it to yourself to order and let us prove our assertions.

GUARANTEE. We guarantee all bulbs sent out by us to be true to name, and free from disease and thrip, to the full extent of the purchase price. If any are found otherwise we will be glad to make replacement or refund the purchase price.

TERMS. Net cash with order. 25% will hold order until March 1. Any orders not fully paid will be sent C. O. D. for balance. Minimum order \$1.00.

DISCOUNTS. The following discounts are allowed on orders. Cash or bulbs—your selection.

\$10.00 or more	5%
\$25.00 or more	10%
\$100.00 or more	15%

No discounts allowed on special or combination offers. 3 bulbs at 12 rate, 25 bulbs at 100 rate, 250 bulbs at 1000 rate. For 1000 rate multiply 100 rate by 9. For large quantities write for quotation, stating your exact wants.

SHIPMENT. All orders are sent prepaid in the U. S. east of the Mississippi. To points west of the Mississippi add 25c per 100 for the three larger sizes and 10c per 100 for the three smaller sizes.

Orders will be shipped as soon as received if the weather is favorable. If not they will go forward at the earliest opportunity.

All stock offered subject to prior sale.

SUBSTITUTION. If we are out of size ordered we will substitute equal value or more in the nearest size we have of the variety ordered. We will not substitute a different variety without permission.

Join the Ohio State Gladiolus Society. It costs \$2.00 per year, which includes a subscription to *The Gladiolus Review*, the official organ of the American Gladiolus Society. Also if you send your membership to us before May 15, together with an order for bulbs for \$1.00 or more we will allow you to choose 50c worth of bulbs as a premium, to be included with your order. In addition the Ohio State Gladiolus Society will give new members 3 bulbs each of four different varieties.

1933 Introduction by
MRS. A. H. AUSTIN
 Originator of the needlepoint type.

Happy Thought Truly a worthwhile achievement. Rich orange verging on salmon. Prim Grand. Large florets - 4½-5 inches. Good substance. 6-8 open, 18-20 on a spike. Tall grower. Has great commercial possibilities. Watch for it in the shows. Large bulbs, each \$5.00. Medium \$3.00. Small \$1.00.

INTRODUCTIONS OF 1931

Dora Gill, A clear melting shade of pink, verging on rose doree. Tall spike, 18-20 florets. 7-9 well placed blooms open at one time. Has won many prizes in the last two seasons.

Large, each	\$8.00	Medium, \$	5.00	Small, \$	3.00
Dozen	50.00	Medium,	30.00	Small,	15.00

Florence Hubler, One of the very tallest glads in existence. Will grow nearly six feet high. Rapid propagator. Blooms 4-4½ inches in diameter, 4-5 open, 22 florets to a spike. Greyish green foliage. Color white tinted pink, much resembling Mrs. Dr. Norton.

Large bulbs, each	\$3.00	Medium,	\$2.00	Small,	\$1.25
Dozen	25.00	Medium,	16.00	Small,	8.00

Bluelight, White, tinted blue with pure violet-blue throat. Good substance. Florets well placed on a straight spike.

Large bulbs, each	\$1.00	Medium,	\$.50	Small,	\$.30
Dozen	9.00	Medium,	5.00	Small,	3.00

Corydon, Bright pink with conspicuous maroon blotch. Edges of petals flaked to give smoky tinge. Good substance. Striking.

Large bulbs, each	\$2.00	Medium,	\$1.00	Small,	\$.50
Dozen	18.00	Medium,	10.00	Small,	5.00
